Based on the transitive property, complete this statement.

$$a \geq b$$

$$b \geq c$$

$$a \geq c$$

If  $2(y-3) \geq 3x-4$  and  $3x-4 \geq 6-y$ , then  $2(y-3) \geq \underline{\quad}$

IF  $a > b$  or  $1 > 2$   
 and  $b > c$  or  $2 > 3$   
 then  $a > c$  or  $1 > 3$

$$6-y$$

This system of linear equations is graphed as shown.

$$\begin{cases} 3x + y = 2 \\ x + 3y = -18 \end{cases}$$

What is the solution to this system of equations?

A (2, -6)

B (3, -7)

C (-6, 2)

D (-7, 3)

Renee is going bowling.

- The cost per game is \$2.50.
- Renee will need to rent a pair of bowling shoes for \$1.50.
- She can spend up to \$16.00 to bowl and rent a pair of shoes.

What is the maximum number of games that Renee can bowl?

A 4

B 5

C 6

D 9

$$16 \geq 1.50 + 2.50x$$

$$\begin{array}{r} -1.50 \quad -1.50 \\ \hline \end{array}$$

$$\frac{14.50}{2.50} \geq \frac{2.50x}{2.50}$$

$$5.8 \geq x$$

can not pay for part  
of a game or play  
part of a game

means less than = shade below      can he spend exactly \$24? Yes  
 line is solid because it can be equal

Malik can spend **no more than** \$24 to buy pecans and cashews. He will pay \$6 per pound for pecans and \$8 per pound for cashews. Which graph best represents the number of pounds of pecans and the number of pounds of cashews Malik can buy?

Directions: Click on the grid to **plot two points**. The coordinates of the points **must be integers**.

Ms. Scott will pay \$2,000 to have her house painted. The amount each painter earns,  $A$ , varies **inversely** for the number of painters,  $n$ , that will paint the house. Which equation best represents this situation?

A  $A = 2,000 + n$

B  $2,000 = A + n$

C  $A = 2,000n$

D  $2,000 = An$

Inverse Variation

$$y = \frac{k}{x}$$

$$xy = k$$

$k =$  constant of  
Variation

The following graph shows a relation.

Which of the following best describes the range of this relation?

- A All real numbers
- B All real numbers between -10 and 10
- C All real numbers less than or equal to -4
- D All real numbers greater than or equal to -4

range = y values  
 lowest y-value is -4  
 all other values are greater

Directions: Click and drag the answers to the correct boxes.

Each of these data sets has a mean of 20.

Set 1: { 18, 19, 20, 21, 22 }

Set 2: { 20, 20, 20, 20, 20 }

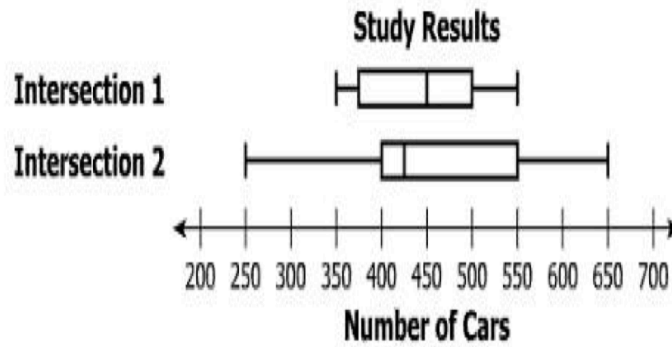

Set 3: { 16, 18, 20, 21, 25 }

Order the sets from greatest standard deviation to least standard deviation.

*greater spread = bigger standard deviation*

A study was conducted to determine the number of cars that passed through two intersections each day for 20 days. The results are summarized in these box-and-whisker plots.

Which statement is best supported by these data?

- A The range of the data for Intersection 2 is twice the range of the data for Intersection 1.
- B The lower quartile for Intersection 1 is greater than the lower quartile for Intersection 2.
- C The interquartile range for Intersection 1 is the same as the interquartile range for Intersection 2.
- D The total number of vehicles that passed through Intersection 2 is greater than the total number of vehicles that passed through Intersection 1.

Which of these functions has exactly two different zeros?

A  $f(x) = \frac{1}{10}x + 4$

B  $g(x) = \frac{3x - 10}{3}$

C  $h(x) = x^2 - 4x + 4$

D  $k(x) = x^2 + 11x + 24$
